

Eminence 6.0 – Network Simulation Task

Requirements and Rules

Part A – Software and Hardware

- Cisco Packet Tracer <9.0.0> installed and tested on the laptop you will bring.
- Packet Tracer needs a free Cisco Networking Academy / Skills for All account. Create it and sign in before the event.

Part B – Knowledge you are expected to have

- VLANs and trunking.
- Inter-VLAN routing on a multilayer switch.
- Static routing and dynamic routing.

Part C – Rules during the task

- No AI tools. AI assistants of any kind: ChatGPT, Claude, Gemini, Copilot, AI browser extensions or similar are strictly prohibited. All work must be your team's own, produced during the session.
- Start from a completely empty workspace. Pre-built or partly built files mean disqualification.
- Save every ten minutes. Packet Tracer does not autosave.

Part D – Submission

- Submit one Packet Tracer file only.
- Name it exactly TeamName_NetworkTask.pkt and upload it to the Network Task folder of your team's GitHub repository.
- Run copy running-config startup-config on every device before saving the .pkt file, and keep the device names from the task diagram.
